RAHUL PODDAR

DevOps Engineer | Azure DevOps | AWS | Terraform | CI/CD | Cloud Automation

Rahul Poddar | rahulpoddarcse1@gmail.com | +91 83687 01708 | Rahul Poddar | Noida, India

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on internship experience **deploying, automating, and monitoring cloud infrastructure on Azure and AWS** — skilled in Terraform (IaC), Jenkins & GitHub Actions CI/CD, and Docker/Kubernetes containerization.

Drives Git-driven (GitOps-style) workflows and full-stack observability with Prometheus & Grafana, delivering reproducible, cost-efficient, and scalable cloud deployments.

CORE TECHNICAL SKILLS

Cloud Platforms:	Microsoft Azure, AWS (EC2, S3, IAM, Lambda), Cloud Infrastructure
IaC:	Terraform — Modules, Variables, Parameterized & Reproducible Provisioning
CI/CD:	Jenkins, GitHub Actions — Pipeline Design, Build & Deployment Automation, Troubleshooting
Containers:	Docker, Docker Compose (Multi-stage Builds), Kubernetes (Pods, Deployments, Services)
Monitoring:	Prometheus, Grafana — Dashboards, Server Health Metrics, Incident Monitoring
GitOps & VCS:	Git, GitHub, Azure DevOps Repos — Branching, Pull Requests, Code Review
Web & Ops:	Nginx (Reverse Proxy), HTTP/HTTPS, Runbook Authoring, Cloud Cost Hygiene
OS & Scripting:	Linux (Ubuntu) Administration, Bash / Shell Scripting, Automation Scripting
Tools:	JIRA, Notion

PROFESSIONAL EXPERIENCE

DevOps Intern — DevOps Insider **Dec 2025 – Present**

- Deployed and monitored **AWS (EC2, S3)** cloud infrastructure alongside senior engineers, supporting containerized workloads with **Docker**.
- Maintained **CI/CD pipelines in Jenkins & GitHub Actions**; troubleshot failed builds and standardized pipeline steps in team runbooks.
- Provisioned and modified sandbox cloud resources with **Terraform (IaC)** under senior supervision, applying IaC workflows for reproducible environments.
- Configured **Prometheus and Grafana** dashboards to track server health metrics and participated in incident monitoring.
- Authored infrastructure setup and pipeline documentation, supporting onboarding and knowledge sharing across the team.

PROJECTS

Automated Preview Environments — Terraform + GitHub Actions (AWS / Azure)

- Designed a fully automated **IaC workflow**: GitHub Actions triggers Terraform on PR open to provision a cloud staging environment.
- Implemented environment lifecycle management so preview environments auto-destroy on PR merge/close, **eliminating idle cloud resource costs**.
- Standardized PR-based environment provisioning, **improving deployment frequency by an estimated 30%** in testing.
- Configured parameterized Terraform modules for reproducible deployments on AWS and Azure, with every change passing PR-based code review via GitHub Flow.

Containerized Task Manager — Docker Compose Deployment

- Containerized a full-stack task management app (frontend, backend, database) using **Docker multi-stage builds** to reduce image size.
- Orchestrated multi-container deployment with **Docker Compose**, configuring **Nginx** as a reverse proxy and managing service dependencies.
- Deployed and tested the containerized stack on a clean **Linux (Ubuntu)** host, documenting the reproducible build → run → proxy → database flow in a README.

EDUCATION

Bachelor of Computer Applications (BCA) — Greater Noida Institute of Technology **Jun 2023 – Jun 2026**

- Specialized in **DevOps and Cloud Computing** — coursework covering containerization, CI/CD, and workflow automation; hands-on with Docker and Kubernetes on AWS and Azure.

CERTIFICATIONS

- **Kubernetes Certification** — Dec 2025
- **Jenkins Certified** — Mar 2026
- **AWS Fundamentals** — Apr 2026
- **Terraform Specialist Certification** — Mar 2025
- **Docker Certified** — Jan 2026
- **Azure Data Fundamentals** (Microsoft) — Nov 2023
